

**MPC-SCUBAPRO****Scubapro Full Face Mask
with Blank Port**

The DIVE LINK part "MPC-SCUBAPRO" is a robust waterproof microphone molded into a Scubapro Full Face Mask blank port.

Here are the instructions to replace the existing blank port with the Dive Link waterproof microphone.

1. Remove the existing blank port from the full face mask. Choose which side of the mask you prefer to place the microphone into.

Either side is appropriate.

Loosen the port clamp with a screwdriver and pull away the blank port.

2. Install the Dive Link microphone, and tighten the clamp.
3. Install the spider strap from behind the buckle. Insert the strap through the buckle opening closest to the plug.

4. Loop the strap back through the buckle between the two cross bars.

Clamp

Cleaning

A mild detergent solution may be used to clean the microphone after use, or rinsed and allowed to dry.

It is important that after use the microphone be allowed to dry and is stored in a dry condition.

Some customers may wish to order spare microphones to unplug and remain with their full face mask for sanitary reasons. The microphone may be unplugged from the EAR-MIC connector and connected to other Dive Link equipment. All connectors are gold plated and may be unplugged or connected while underwater.
